

Converber 2.2.1

Converber is a unit converter utility that will help make easy conversions between 1234 various units of measure in 38 categories. Converber converts everything from length and force to flow and temperature.

Features include:

- Gives immediate access to all categories or single category
- Favorites menu to bookmark your frequently-used conversions
- Currency rates...updated daily
- Inline calculator(*/-+^ and more)
- Automatic updates
- Quickly search the unit list and immediately see results
- Step backwards or forwards through the most recently used conversions
- Toolbar for faster mouse operation
- Single or multiple preference file(s) for different users
- Shows either common units or ALL units
- Converts as you type, so no convert button is required
- Includes equation editor to add your own custom units
- Allows you to select/unselect the conversion file(s)
- Can change the number of significant digits of the output
- Option to select decimal-point precision
- Option to select scientific notation only
- Extensive number formatting
- Inverts selected units with the quick swap feature
- Status bar to display the current category
- Converts left-to-right OR right-to-left

- Runs portable/stand-alone using no dll files or registry settings
- Remembers last window position and size (if desired)
- Offset correction for meter value compensation
- Comes with extensive help file
- Supports transparency
- Supports a multi-language user interface

There is a help file included on this disk that does not install with the program. (See Converber.chm)
